Noble Minerals Encounters Significant Copper, Nickel, Platinum Group Mineralization in Drilling on the Cere Villebon Property, Quebec

Toronto, Ontario – July 11, 2023 – Noble Mineral Exploration Inc. (“Noble” or the “Company”) (TSX-V:NOB, FRANKFURT: NB7, OTCQB:NLPXF) is pleased to report on the reception of final drill core analysis results on the Cere Villebon drill program located southeast of Val d’Or, Quebec

- Sampling of Hole 1 from the Cere Villebon drill program returned analyses of 5.2 meters* of **0.66% copper, 0.94% nickel, 0.04% cobalt, 0.25 g/t platinum and 0.66 g/t palladium** within a 63 meter* wide mineralized zone grading 0.24% copper, 0.38% nickel, 0.02% cobalt, 0.11 g/t platinum and 0.33 g/t palladium. (*true width not known at this time);
- Sampling of Hole 5, located 25 meters east of Hole 1, of **0.46% copper, 0.69% nickel, 0.03% cobalt 0.78 g/t platinum and 1.28 g/t palladium** over 19 meters* within a 37 meter* zone of 0.36% copper, 0.50% nickel, 0.02% cobalt, 0.36 g/t platinum and 0.54 g/t palladium. (*true width not known at this time);
- The mineralization is associated with a strong chargeability anomaly associated with a resistivity low reflecting the sulphide mineralization encountered in the core. (See Figures 1, 2 and Image 1);
- Holes 2, 3, 4, 6, and 7 showed no significant mineralization and were drilled off trend of Hole 1 and 5 to test targets on other parts of the property.

Cere Villebon Project

A drill program and geophysical survey have been completed on the Cere Villebon Project southeast of Val d’Or, Quebec. The program included 7 diamond drill holes for a total of 1,955 meters. Significant mineralization was encountered in holes 1 and 5 and are summarized in Table 1.

Historic drilling and resource estimates done by the Groupe La Fosse Platinum Inc on the North Zone (1987) evaluated a historical resource of 421,840 tonnes grading 0.52% copper, 0.72 % nickel and 1.08 g/t combined platinum-palladium (Groupe La Fosse Platinum Inc., 1987 Annual Report).

This estimate is historical in nature, non-compliant to NI 43-101 Mineral Resources and Mineral Reserves standards, and therefore should not be relied upon. A Qualified Person has not done sufficient work to classify the historical estimate as current mineral resources, and these estimates should only be considered as an indication of the mineral potential of the Property.

Subsequent to the drilling a 7.2 kilometer program of Induced Polarization and Magnetometer Survey was done in the vicinity of the diamond drilling. Figure 1 is a pseudo-section in the vicinity of Hole 1. The pseudo-section shows a strong chargeability anomaly associated with a resistivity low reflecting the sulphide mineralization encountered in the core. (Image 1)
